

## Motivation

- HUMAN=  Driven by genuine interest.
- AI=  Operates based on programmed instructions and data.

## Intentionality

-  Involves deliberate and mindful choices.
-  Lacks intentionality, follows pre-set algorithms.

## Authenticity

-  Reflects unique perspectives and emotions.
-  Outputs are derivative, based on processed information.

## Emergence

-  Novel ideas arise from simple components through complex processes.
-  Combines existing information, often leading to derivative results

# HUMAN CREATIVITY VS ARTIFICIAL (AI) CREATIVITY

HUMAN =  AI = 

## Problem finding

-  Excels at identifying, defining, and formulating problems uniquely.
-  Can only address problems it has been programmed to recognize.

## Hallucinations

-  Products of complex neurological processes.
-  Computational errors or anomalies.

## Self-expression

-  Reflects personal insights and feelings.
-  No self-expression; outputs lack a personal touch.

## Originality

-  Original ideas often emerge spontaneously.
-  Can produce original outputs but lacks true novelty.

## Process

-  Complex cognitive processes.
-  Data-driven mechanisms.
